

December 21, 2023: I came to school at Akram Jomaa and later on I went to my science class where we were given time to start our science fair project. For the past few weeks I've been struggling with an experiment to do. Then suddenly I think of the idea I have now: how can sound frequencies affect our learning? I consulted a teacher about the idea and she agreed it's a good topic to explore so then I decided I'll get started in winter break to ensure good results without the worry of other school related assignments I have!

January 3 and 4, 2024: The last few days of winter break were upon me and I started my project researching and doing my experiment which I sadly chose to start at 11:00 pm to 2:00am which was quite a poor decision on my part but still went on about the project either way. And finished it or so I thought and submitted it. Even though I forgot to add application and sources of error slides I still got into the next round!

March 12, 13 and 14, 2024: I started filling in my CYSF 2024 platform information and fixing up my project, which leads me to where I am now writing this logbook and close to finishing my entire project.
